

Swiss-Made Watches

User manual &
warranty description
for KM watches

KM
EMPORIUM

Handling and corrections, winding stem with 3 positions:

Pos. 1 Running position

Pos. 2 Quick date correction

Pos. 3 Time setting with stop-second, stopping of movement (storage)

Display by means of hands:

Hours, minutes, seconds.

Date in window, semi-instantaneous. The movements are equipped with a battery end-of-life display (EOL), where the second hand advances every 4 seconds, and an adaptively controlled drive system.

KM WARRANTY

KM Emporium GmbH guarantees that the product ordered is free of defects and functional for 2 years after delivery.

The warranty period continues to run regardless of the provision of any warranty services. KM Emporium GmbH may choose to have the warranty honoured by

- free repair (original warranty period continues for the whole product);
- replacement with a new, equivalent product by KM Emporium GmbH (new warranty period of 2 years as of replacement);
- credit note at the current price, (at most, the sales price at the time of the order); or
- reduction.

If KM Emporium GmbH decides to remedy the defects brought to its attention, the customer must give it the opportunity to do so. Defective parts must be returned to KM Emporium GmbH - at the latter's request and only with its express consent - at the expense of KM Emporium GmbH in the condition in which they were delivered and in their original packaging if possible.

The KM repair centre may perform required repair work that is not covered under this warranty subject to a charge. This charge will be dependent on the watch design and the type of work requested. Please note that these charges are subject to change.

THE WARRANTY DOES NOT COVER THE FOLLOWING

The warranty on a watch relates to the movement and not to other parts such as the case, glass, straps, bracelets, tarnishing or plating.

Signs of wear and tear on the watch are to be regarded as normal consequences of use. The effects of sweat on the strap vary from person to person due to differences in acid content.

The warranty is invalidated if a third party carries out repairs or other work on the product without the prior written approval of KM Emporium.

Any further, non-binding statutory provisions concerning the warranty are excluded.

BATTERIES

Wearing parts such as batteries, in particular, are excluded from the warranty. In all other respects, the exclusions of liability set out in section 8 of the KM General Terms and Conditions apply.

The KM watches are equipped with standard batteries. The average life of a watch battery is 60 months. Changing a battery without the correct tools can damage the metal and delicate parts in the watch.

We recommend using a reputable jeweller for this service. Please do not attempt to open the case back yourself as this can invalidate the warranty.

LEATHER STRAPS

The leather straps may darken and change in colour, which is partly due to body sweat from your skin and exposure to sunlight over time. We recommend that you keep your leather strap away from intense sunlight, heat and humidity. If exposed to water, oil and makeup, your leather strap may become dirty or discoloured. If you would like to purchase a replacement strap for your model, please refer to our website.

Please note that straps (or metal bracelets and clasps) are not covered by the warranty.

Please refer to the support page of our website for instructions on how to change a strap or bracelet.

WATER-TIGHT 30 m (3 bar) 3 ATM

KM Emporium watches are water-tight up to 3 ATM: this means that the watch is splash-proof. KM Emporium watches with 3 ATM water-tightness cannot be worn when showering, bathing, swimming or diving. At most, KM Emporium watches should only be exposed to small splashes of water or chemical substances such as perfume, cosmetics and cleaning agents.

Water-tightness is only guaranteed if the crown is in the initial position and should be checked once per year.

30 m (3 ATM) swimming/diving/bathing are not permissible

50 m (5 ATM) showering is permissible

100 m (10 ATM) swimming and snorkelling are permissible

200 m (20 ATM) swimming and snorkelling are permissible

300 m (30 ATM) diving and deep-sea diving are permissible

If your watch experiences a sudden change in temperature or pressure, slight condensation may appear beneath the glass of your watch. This generally disappears after a few days if it is left alone. Please do not attempt to dry it out. If the condensation persists, please contact our customer relations team for further advice.

DEMAGNETISATION AND MAGNETIC FIELDS

Analogue quartz watches can be adversely affected by magnetism and may stop, gain or lose time if exposed to magnetic objects for long periods of time.

Avoid putting your watch on electronic devices since these create magnetic fields that may damage it.

An affected watch remains magnetised even after being removed from the magnetic source. We therefore recommend returning your watch to the KM repair centre to be demagnetised. To test if a watch has become magnetised, place it next to a compass. If the hands of the compass start to turn, it is magnetised and will need to be returned for demagnetisation.

Please e-mail service@km-emporium.com for further information.
